

Higuchi Biosciences Center

NIH Center of Biomedical Research Excellence

Established in 1989, the Higuchi Biosciences Center is a [center of centers](#) engaged in biomedical research. As a designated research center of the [KU Center for Research \(KUCR\)](#), the Higuchi Biosciences Center seeks to enhance the environment for interdisciplinary, basic research.

Research Centers:

- Cancer Experimental Therapeutics
- Protein Structure and Function
- Bioanalytical Research
- Neurobiology and Immunology Research
- Biomedical Research
- Program Project on Aging

Funding Sources:

National Institutes of Health, National Science Foundation, industrial partners, and private foundations

Collaborations:

- Adams Institute for Bioanalytical Chemistry
- Department of Chemistry
- Department of Molecular Biosciences
- Department of Pharmacology and Toxicology
- Office of Therapeutics, Discovery and Development

Facilities:

- **Transgenics & Gene Knock-out**
- **Genomics**
- **Microscopy & Imaging**
- **High Throughput Screening**
- **Analytical Proteomics**
- **Biobehavioral Measurement Lab**
- **Pathology Lab**
- **Chemical Methodologies & Library Design**
